Department for Geoinformation

Introduction

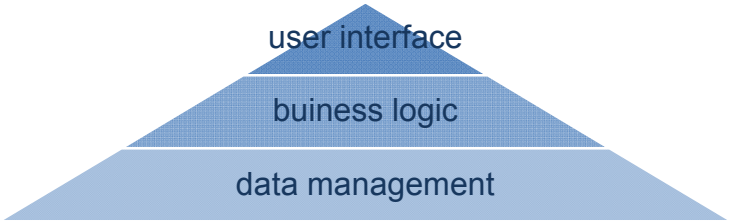
- Decentralized organisations with distributed responsibilities

- How to serve costumer needs?

Department for Geoinformation

Felxibility

- is needed to profit of the chances. Examples:
  - data maintenance where changes happens
  - handling of private or public services
- diminishes in the Trier-Architecture of an SDI

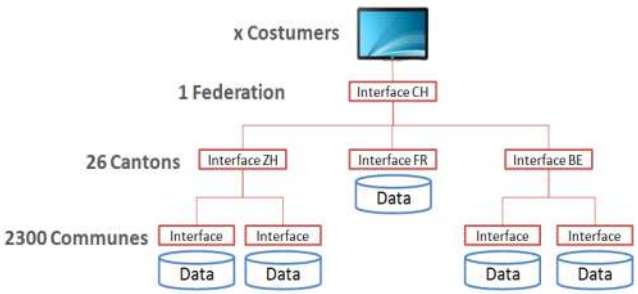


- crucial requirement for future cadastral systems

Department for Geoinformation

Creativity

- Common and estabished concepts often fails due to the shared autonomy
- Example: central user-portal for the official cadastral surveying data



Department for Geoinformation

Standardization

- ALL components cooporate according to approved standards

- Standards for:
  - Data models
  - Processes
  - Services
  - Algorithms
  - Presentations

Department for Geoinformation

Commitment

- No success without strong commitments!

- Special panel e-geo.ch for common decisions

Department for Geoinformation

Inputs for development

- Catastral systems has to become more flexible and dynamic
- From SDI to Spatial Information Infrastructure (SII) cadastre has to lead the way
- Experiences in federal systems provides worthwhile impulses
